

The Tourette Association of America Yale Child Study Center of Excellence is a pioneering leader in research and experimental therapeutics of TS and related disorders. The Yale Child Study Center also provides education, training, and outreach to increase awareness and knowledge about TS.

We provide an integrated service to our patients beginning with comprehensive assessment, and including, as indicated, behavioral therapy; medication management; consultation with schools, pediatricians, and community clinicians; and parent management training. Behavioral interventions include Comprehensive Behavioral Intervention for Tics (CBIT), which we helped to develop; exposure/response prevention therapy (E/RP) and other forms of CBT for OCD and hair-pulling (Trichotillomania). We also provide psychological and pharmacological treatment for such common co-morbidities as OCD, ADHD, anxiety disorders, and depression. We collaborate closely with the local chapter of the TAA and other patient advocacy groups.

SERVICES OFFERED:

- Comprehensive evaluation and treatment
- Psychiatric and medication management by child psychiatric experts
- School consultation and collaboration
- Neuropsychological and Educational Testing
- Comprehensive Behavioral Intervention for Tics (CBIT)
- Exposure and Response Prevention (E/RP)
- Expertise regarding post-infectious and auto-immune syndromes
- Cutting edge research
- Current TS Information and educational programs
