

The TReC Study

PARTICIPATE IN TIC RESEARCH

Do you or your child make uncontrollable movements or sounds called "tics"?

To participate the person with tics must be **10-17 years old**

This study includes recording brain signals using a non-invasive machine called an electroencephalogram (EEG) as well as MRI imaging.

All eligible participants receive Comprehensive Behavioral Intervention for Tics (CBIT) in-person or virtually. CBIT is an established therapy for tics.

Compensation for your time will be provided!
